

# Washington Preferred Drug List

---

## What is the Washington Preferred Drug List?

HRSA, in coordination with the Health Care Authority (HCA) and Labor & Industries (L & I), have developed a list of preferred drugs within a chosen therapeutic class that are selected based on clinical evidence of safety, efficacy, and effectiveness. The drugs within a chosen therapeutic class are studied by an evidence-based practice center (EPC). A written report on the comparative safety, efficacy, and effectiveness from the EPC is evaluated by the Washington State Pharmacy and Therapeutic Committee which makes recommendations to the state agencies regarding the selection of the preferred drugs on the Washington Preferred Drug List (PDL). [WAC 388-530-4100]

## What is the process to obtain drugs on the Washington PDL?

1. **Preferred Drugs** - Prescription claims for preferred drugs submitted to DSHS are reimbursed without authorization requirements unless the drug requires authorization for:
  - a. Safety criteria;
  - b. Special subpopulation criteria; or
  - c. Limits based on age, gender, dose, or quantity.
2. **Non-preferred Drugs** - Prescription claims for non-preferred drugs submitted to DSHS are reimbursed without authorization requirements when written by an Endorsing Practitioner who has indicated “DAW” on the prescription unless the drug requires restrictions for safety. See WAC 388-530-4150.
3. Prescription claims for non-preferred drugs submitted to DSHS are reimbursed only after authorizing criteria are met if written by a non-endorsing practitioner.
4. Pharmacies must call HRSA for authorization when required. Call 800.848.2842 (Option 1) or fax to **360.725.2020**.

## What are the authorization criteria that must be met to obtain a non-preferred drug?

- For most drug classes on the Washington PDL, the authorization criteria is that the client must have tried and failed, or is intolerant to, at least one preferred drug. Drugs may have criteria that go beyond these basic criteria for the reasons stated in #1 on the previous page.
- Drugs that are in drug classes on the Washington PDL that have not been studied by the evidence-based practice center(s) and have not been reviewed by the P&T committee will be treated as non-preferred drugs and will require authorization.

HRSA requires pharmacies to obtain authorization for non-preferred drugs when a therapeutic equivalent is on the Washington PDL. The following table shows the preferred and non-preferred drug in each therapeutic drug class on the Washington PDL:

**Note:** HRSA changed the format for multiple drug listings. A slash (/) is used to denote multiple forms of a drug. For example: “Cardizem<sup>®</sup>/CD/LA/SR” represents immediate release Cardizem, as well as the CD, LA, and SR forms. A hyphen (-) is used to indicate combination products. For example: “benazepril-HCTZ” represents the combination product of benazepril and hydrochlorothiazide, rather than benazepril AND the combination product.

Drug Class	Preferred Drugs	Nonpreferred Drugs
